FDA’s New Nutrition Facts Label

Below are sample posts and general background information you can incorporate into your social media posts, blogs, e-newsletters and presentations. During the months of November and December, please link to the featured resources, which include the interactive Nutrition Facts label, downloadable fact sheets, a video, and webinars (with CME credit) from FDA’s Center for Food Safety and Applied Nutrition.

Please tailor these messages for your members and other audiences, formatting links to fit your organizational style and outlet requirements. We also encourage you to use the hashtag #NewNutritionFactsLabel along with the messages.

Background

The Food and Drug Administration (FDA) recently updated the design and content of the Nutrition Facts label on packaged foods and drinks. These changes were based on the most up-to-date scientific information and new research in the field of nutrition along with input from the public. This is the first major update to the label in more than two decades.

The new label design makes it easier for shoppers to read and understand the nutrition information – and supports more informed choices about foods and drinks. Some of the changes include bolded calorie listing, updated serving sizes, and new and revised nutrition information. For more details about changes to the label and how it supports healthier eating choices, visit: https://www.fda.gov/food/food-labeling-nutrition/changes-nutrition-facts-label. An Interactive Nutrition Facts label is also available in Spanish at https://www.accessdata.fda.gov/scripts/interactivenutritionfactslabel/es-default.cfm
